M-9 ASSAULT MEDICAL BACKPACK

The M-9 Assault Medical Backpack from Tactical & Survival Specialties, Inc. (TSSI) was specifically designed to better fulfill the needs of the operational medic involved in vehicle or aircraft operations. The problem with conventional medical packs is the bulk and thickness of the bag interfering with the medic's ability to sit or move in vehicles or aircraft. The M-9 was designed and created with the guidance of a Physician's Assistant (PA), who also served as a Special Operations 18D medic, to provide a backpack with a very thin profile that carries the necessary medical support items for operational medics.

Internal Compartments

- 2 Airway Supply Panels (one pre-sewn, one modular)
- 4 removable internal pockets (located in main compartment)
- Pack flap with two small mesh pockets, hidden pocket behind airway panel

Carry Options

- Carry handles located on top of pack body and flap
- Backpack straps and waist strap
- Top of pack is configured with two removable straps (via fastec buckles) designed to be sewn onto body armor or a load bearing vest

Additional Features

- Bottom pocket designed to hold IV solutions (accessible through front zipper or from inside of pack via trap door bottom)
- Internal zipper pulls are red para-cord for fast and easy identification
- MOLLE attachment points on side of pack body and front flap
- Drain hole located in bottom
- Webbing loose ends on back pack straps and waist strap have Velcro® securing straps (for tying up bitter ends)
- 3x2 in. Velcro® patch (loop side) sewn on front cover for IR identifiers
- Made in the USA with all US components

Closed Dimensions: 20" h x 13" w x 3" d
